EGFR, CREATININE-CYSTATIN C (CKD-EPI 2021)

Collected on Jun 11, 2026 10:19 AM

Click to learn more

Results New

CREATININE, ENZYMATIC

Normal range: 0.69 - 1.22 mg/dL

CYSTATIN C, SER/PLAS

Normal range: 0.61 - 0.95 mg/L

EGFR, CREATININE+CYSTATIN C-BASED FORMULA (CKD-EPI 2021)

Normal value: >=60

Value
86

INTERPRETIVE INFORMATION: Cystatin and Creatinine with eGFR

The estimated glomerular filtration rate (eGFR) was calculated using the 2021 CKD-EPI eGFR creatinine-cystatin equation. This equation is validated in individuals 18 years of age and older. Accurate estimation of GFR requires stable day-to-day filtration markers (creatinine and cystatin C). Filtration markers are influenced by non-GFR determinants including generation from cells and diet, tubular secretion and reabsorption, and extra-renal elimination. These determinants may affect eGFR accuracy. The eGFR is normalized to a body surface area of 1.73 square meters.

GFR Categories in Chronic Kidney Disease (CKD)

GFR GFR (mL/min/1.73
Category: square meters): Interpretation:
G1 90 or greater Normal to high*
G2 60-89 Mild decrease*
G3a 45-59 Mild to moderate decrease
G3b 30-44 Moderate
to severe decrease
G4 15-29 Severe decrease
G5 14 or less Kidney failure

*In the absence of evidence of kidney damage, neither GFR category G1 nor G2 fulfill the criteria for CKD (Kidney Int Suppl 2013;3:1-150)
Performed By: ARUP Laboratories
