Impression

IMPRESSION: Normal ultrasound examination of the abdomen.

Signed by: Myron Marx, MD 5/15/2017 3:33 PM

Narrative

Abdominal ultrasound

Clinical information: Intermittent 18 pain right side

FINDINGS: Real-time imaging of the abdomen was performed utilizing a multifrequency vector transducer.

Liver: The liver is normal in size, contour and echogenicity. No focal cystic or solid hepatic lesions are identified. The intrahepatic biliary ducts are not dilated. The common bile duct measures 4.1 mm.

Gallbladder: The gallbladder is normally distended. There is no evidence of cholelithiasis. The gallbladder wall is not thickened. No polyps are present. There is no fluid adjacent to the gallbladder. There is no tenderness to palpation over the gallbladder.

Pancreas: Unremarkable as visualized.

Spleen: The spleen is normal and measures 9.9 cm.

Kidneys: The right kidney measures 11.4 cm and the left kidney measures 11.2 cm. The renal echogenicity appears normal. No cystic or solid renal masses are identified. There is no evidence of nephrolithiasis or obstruction.

Other: No free intraperitoneal fluid. The abdominal aorta is normal . The inferior vena cava is normal.
